KeySafe system extension – Keeping keys inside the building
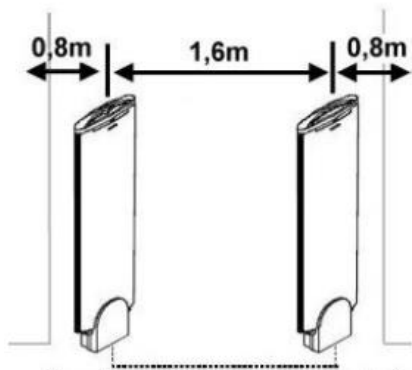

Date: 2017.10.25

Version 1 – EAS (Electronic Article Surveillance) system with security gates

Security/ EAS gates, detectors can be installed at exit, just like the ones in department stores, shops, libraries.

The number of the gates needed depends on the width of the exit. Cables between the gates run under the floor, tile.

The **keyholder plugs** are combined with theft warning tags.

Two UltraPost detectors, gates are to be placed for one exit (e.g. 1,8m).

Installing security gates can be part of a separate quotation.

Version 2 – ProxerNet KeySafe system combined with ProxerNet Access Control system

ProxerGate revolving gates, turnstiles are installed at the entrance, using ProxerNet software Access Control module.

Gates deny passing by if keys are not returned to the cabinet.

Are you interested? Request a quotation on Procontrol developed and produced turnstiles and revolving gates.

Auxiliary software module, preventing exit without returning the keys (integration of ProxerNet software KeySafe module and Access Control module) can be ordered.
